

KTL - TECHNOLOGY

**LONG LASTING SURFACE PROTECTION
WITH LONG TERM EXPERIENCE**

A close-up photograph of a red mechanical component, possibly a handle or lever, with a black spiral binding. A yellow rectangular label is affixed to the black part, featuring the 'KTL' logo in large black letters. Below the logo, the word 'protected' is written in a smaller, yellow, lowercase font on a black background. The background is dark and out of focus.

KTL

protected

**ENVIRONMENTALLY FRIENDLY – LONG LASTING –
CLEAN APPEARANCE**

- Environment friendly water based painting technology
- Highest quality standards
- Long term experience for more than 10 years
- Treatment of all important product parts
- Extremely weather resistant

**COMPLEX
TRI-CATIONIC PHOSPHATING**

The tri-cationic phosphating (Zinc Nickel Manganese) is commonly used in the automobile industry, and represents the highest standards, which provide the best "foundation" for paint and corrosion resistance.

**QUALITY
RAW MATERIAL**

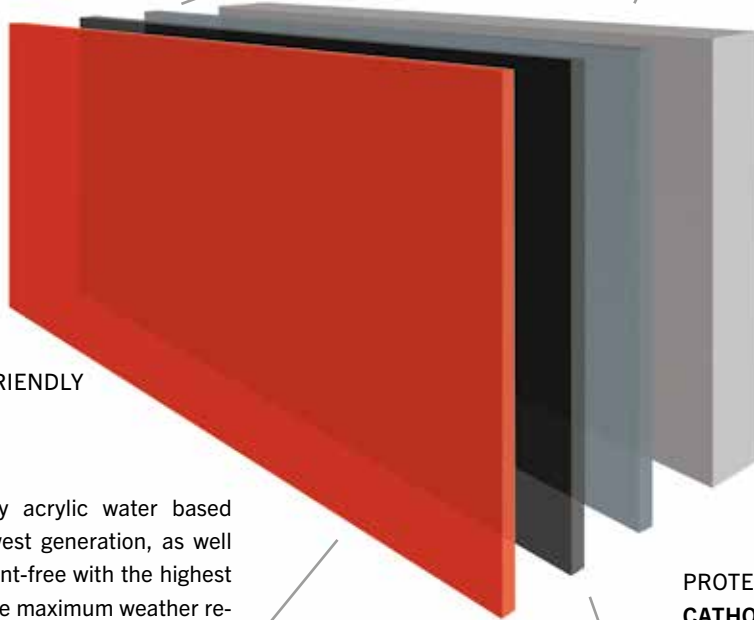

The basic requirement for quality coating is the ideal preparation of the surface (amongst other things, sandblasting) and thus offering an optimum result.

**ENVIRONMENTALLY FRIENDLY
TOP COATING**

Environmentally friendly acrylic water based top coats from the newest generation, as well as powder coating solvent-free with the highest surface hardness, ensure maximum weather resistance.

**PROTECTIVE
CATHODIC DIP PAINTING**

Unique KTL process with years of experience and environment-friendly energy consumption, thanks to the exclusive low temperature process.

BESCHICHTUNGSVORGANG

① Sand blasted crane base prepared for the dipping process

② Specialized preparation including high quality zinc phosphating and KTL coating

③ Mobile fork lift component with KTL coat

④ Top coat with water based environment friendly two component paint applied on a 100% automation level
